

Michael Mei

michaelwmei09@gmail.com | michael-mei.com | github.com/mikewm2001

Skills

Languages: Java, Python, JavaScript, SQL, BASH

Backend & Frameworks: Spring Boot, Spring Security, Spring Cloud, Hibernate, REST APIs

Databases & Messaging: MySQL, PostgreSQL, Azure SQL, Cassandra, MongoDB, Kafka, RabbitMQ

Cloud & DevOps: AWS EC2, Elastic Beanstalk, AWS RDS, Docker, Kubernetes, Apache Tomcat, Grafana, OpenObserve

Experience

Backend Software Developer, Walmart Global Tech – Sunnyvale, CA

Apr 2025 – Feb 2026

- Designed and maintained Spring Boot microservices for Walmart's Product Setup pipeline, improving reliability for item-validation and image-classification workflows serving **100M+** SKUs
- Reduced pipeline processing failures by **~40%** by improving error handling and tuning Spring Boot services integrated with Kafka, Azure SQL DB, and Cassandra
- Implemented pod-level rate limiting using token-bucket configuration to handle **400+** RPS bursts, reducing **~25%** of 5xx errors and stabilizing APIs during peak traffic events
- Resolved production request compatibility issues by enforcing mandatory header validation across services, stabilizing seller onboarding workflows across **100%** of daily API calls
- Partnered with DevOps to decommission legacy clusters and retire an Azure SQL database, eliminating redundant infrastructure and saving **\$9,000+** annually in cloud costs
- Resolved **300+** major and critical SonarQube issues, lowering code smells by **~40%**, improving service maintainability
- Optimized release reliability by automating CI/CD validation checks and integrating Slack-based deployment notifications, reducing failed promotions across staging and production environments

Computer Science Tutor, TPR Education, LLC – Remote, USA

Aug 2023 – Apr 2025

- Delivered **600+** 1:1 tutoring sessions in Java and Python, strengthening student understanding of OOP, data structures, and algorithmic problem-solving
- Maintained **95%+** positive student feedback by adapting lesson plans to individual learning needs and improving coding confidence over time

AI Trainer, Outlier AI– Remote, USA

Jan 2024 – Jun 2024

- Designed and optimized structured prompt pipelines for LLM-based workflows, improving consistency across complex reasoning tasks and multi-step data processing
- Diagnosed failure modes and refactored prompt logic and supporting code, improving reliability and task success rates

Projects

Tree Personality Quiz Platform

treepersonalityquiz.com

- Built and deployed a Spring Boot web application with REST APIs for quiz evaluation and real-time scoring
- Integrated PostgreSQL with Hibernate and Flyway for schema management and consistent database migrations
- Deployed on AWS Elastic Beanstalk with RDS, configuring environment variables VPC networking, and security groups for stable cloud execution
- Supported **200+** quiz submissions while maintaining responsive performance under concurrent usage

Nutritrack: Nutrition and Fitness Tracker

github.com/chengl1113/StrawHats-WorkoutTracker

- Developed an Android application using Kotlin and Firebase to track nutrition data with real-time database synchronization
- Integrated external APIs to retrieve 900K+ grocery items and 190K+ restaurant entries for accurate dietary tracking

Education

Boston University– Bachelor of Arts in Computer Science

Aug 2024
